

# AIR CIRCULATION FAN

## FEATURES

- Perfect tube type design specially made of Greenhouses
- It circulates air inside the greenhouse smooth and even.
- Very easy installation at the bottom cord with clamp.
- Supply with complete assembly just plug and start.
- Very low power consumption.
- All material used is rust free and durable.

## ADVANTAGES

- Air Circulation fans maintain good air circulation in this greenhouse full of vegetable seedlings and flower.
- The obvious advantage of more uniform temperature within the Greenhouse.
- Air Circulation Fan can reduce the incidence of foliar diseases. The moving air removes moisture from the plant canopy, resulting in a drier microclimate. When leaf temperatures are allowed to cool much below the air temperature, the dew point is reached and condensation occurs, providing an ideal environment for disease organisms. Radiant cooling on clear nights, especially in non-infrared poly covered houses, will cool plant leaves several degrees below air temperature.

## Model No. ZenCF-40-70

Sr. No	Technical Specification	Details
1	<b>Model -</b>	<b>: ZenCF-40-70</b>
2	Size in MM	: D310 MM X H 400 MM
3	Frame Material	: Powder Coated
4	Blade Materials	: Aluminium Powder Coated
5	Nos. of Blades	: 7 nos.
6	Frequency	: 50 HZ
7	Speed	: 1400 rpm
8	Voltage	: 220 v
9	Air Volume	: 5800
10	Power	: 220 w
11	Weight	: 7 kg
12	Phase	:Single ph
13	Air Throw	: 70 ft
